DEPILIA	METALLIC POT CERA GEL 1.21 TRASPARENTE 400 ml

All cosmetic products manufactured by **Dana Italia s.r.l.** comply with the Good Manufacturing Practice (GMP) conformity with EU regulation 1223/2009 of the European Parliament and of the Council of 30 November 2009 on Cosmetic Products. As an example of manufacturing process, we report a part of Batch card, with instruction for operators.

OPERATIVE PROCESS

Clean the kettle and all other mixer or flask that will be used for production, according to clearing procedure. Weight off raw materials. Proceed with methodic as described in approved batch card.

Manufacturer of depilatory waxes intended for professional use on the basis of checks carried out during the of production and business management.

PHASE A

INGREDIENTS	%	QUANTITY KG	LOT #	CHECK
HYDROGENATED POLYCYCLOPENTADIENE				☐
PARAFFINUM LIQUIDUM				☐

PHASE A

Weigh out all ingredients of phase A and put them into the kettle. Heat until temperature has reached 110° - 115 °C. Start to mix. If the product is competely clear, and you'll start filling the cassettes, make sure the product is between 85° - 90°C.

For a good testing procedure, is important that the mix reach a good equilibrium of chemical, physical and viscosity features; for this reason , wait 3 hours before testing product, during this period , hold product at a temperature around 85°C under stirring. After this period, start with test on bulk, following the QC protocol, approved from company. If the batch pass all tests, proceed with packaging.

PRODUCT NAME

METALLIC POT
CERA GEL 1.21 TRASPARENTE 400 ml

The objective of this stability report is to ensure that product maintains is intended physical, chemical and microbiological quality, as well as functionally and aesthetics when stored under appropriate conditions. The features and the results of study protocol are specified in document relative to "Physical, Chemical and Microbiological Specifics".

STABILITY

This product doesn't contain water, so is highly not probable the microbiological contamination; other substances used as ingredients have all a very high chemical stability and are resistant to oxidation by oxygen contained in atmospheric air; hygroscopic ingredients are not present, for this reason is not possible the presence of water coming from atmosphere. This product can be defined stable and without modification, for three years if stored under appropriate condition and in the original packaging, without opening. This product can be defined stable and without modification, for three years if stored under appropriate condition and in the original packaging, without opening.

STABILITY TEST

This product passed all stability tests, performed in the factory, according to internal test protocol . during tests, the products is put under conditions that can accelerate all phenomena of not stability. At the end of stability tests the product is evacuate for the potential interactions between product and the packaging that might occur during Thermo-Shock Test. This product can be defined stable and without modification , for three years if stored under appropriate condition and in the original packaging, without opening.

HEAT-SHOCK TEST

The aim of this test is to accelerate, the most is possible, the phenomena of "aging" of cosmetic product, for discovering any not stability in a short time.
Product, in his final packaging, has been stored at room temperature for 24 hours, after, it has been stored at -10°C for 24 hours, after, put in professional heater for cartridges of depilatory waxes for 24 hours; at the end, stored at room temperature after this Heat-Shock Cycle, all eventual modifications have been evaluate and compared with a sample, stored always at room temperature and considered as the referring sample. The Heat-shock Test is repeated on the same sample for three cycles.

COMPATIBILITY CONTENT/ BOX

After Heat Shock Cycle have been evaluated all phenomena on packaging such as:

- increased weakness
- brocken areas
- deformations
- change of color and transparence
- change of permeability
- loss of product
- problems with product exit
- label deformation or lowering of coloration
- blockage of opening system
- color transfer from product to packaging

Conclusion: this product, under all stability simulations, doesn't showed any change that induced to change formulation or packaging or labeling or production cycle. It is stable when stored and handled under appropriate conditions. PAO IS 24 MONTHS.
