For a good testing procedure, is important that the mix reach a good equilibrium of chemical, physical and viscosity features; for this reason , wait 3 hours before testing product. After this period, start with test on bulk, following the QC protocol, approved from company. If the batch pass all tests, proceed with packaging.

PRODUCT NAME

SHAMPOO S4 ANTIFORFORA 1000 ml

The objective of this stability report is to ensure that product maintains its intended physical, chemical and microbiological quality, as well as functionally and aesthetics when stored under appropriate conditions. The features and the results of study protocol are specified in document relative to "Physical, Chemical and Microbiological Specifics".

STABILITY

The product contains water. They were used preservatives to warranty the storage for 30 months from the date of the production batch. The added ingredients were carefully evaluated to ensure the efficiency when stored under appropriate conditions and in original packaging, without opening.

STABILITY TEST

This product passed all stability tests, performed in the factory, according to internal test protocol. During tests, the products are put under conditions that can accelerate all phenomena of not stability. At the end of stability tests the product is evaluated for the potential interactions between product and the packaging that might occur during Thermo-Shock Test.

HEAT-SHOCK TEST

The aim of this test is to accelerate, the most is possible, the phenomena of "aging" of cosmetic product, for discovering any not stability in a short time. Product, in his final packaging, has been stored at room temperature for 24 hours, after, it has been stored at -10°C for 24 hours, after, put in professional heater for creams, emulsions, shampoos, lotions, styling waxes for 24 hours; at the end, stored at room temperature after this Heat-Shock Cycle, all eventual modifications have been evaluated and compared with a sample, stored always at room temperature and considered as the referring sample. The Heat-shock Test is repeated on the same sample for three cycles.

COMPATIBILITY CONTENT/ BOX

After Heat Shock Cycle have been evaluated all phenomena on packaging such as:

- increased weakness
- broken areas
- deformations
- change of color and transparency
- change of permeability
- loss of product
- problems with product exit
- label deformation or lowering of coloration
- blockage of opening system
- color transfer from product to packaging

Conclusion: this product, under all stability simulations, doesn't showed any change that induced to change formulation or packaging or labeling or production cycle. It is stable when stored and handled under appropriate conditions. PAO IS 12 MONTHS.
